Postpartum depression (PPD) is a depression that women may experience shortly after childbirth. PPD is different from the “baby blues,” which begin within the first three or four days of giving birth and lift within a few hours or days without the need for treatment. PPD is a deeper depression that lasts much longer. It usually starts within the first month after childbirth, although it can occur any time within the first year. And it can last for weeks or even months. In more serious cases, PPD can develop into chronic episodes of depression.

Apart from the fact that it happens soon after childbirth, PPD is just like any other depression that a woman might experience in her lifetime, except that its symptoms are often related to stressors associated with motherhood and caring for a baby.

**Common symptoms of postpartum depression**

Every woman is different, but some of the more common signs and symptoms of PPD are:
- depressed mood or depression with anxiety
- anhedonia, a loss of interest in things that would normally bring pleasure, including the baby
- changes in weight or appetite
- sleep disturbance and fatigue
- physical feelings of being slowed down or restlessness, jumpiness and edginess
- excessive feelings of guilt or worthlessness that may get worse if the woman has difficulty bonding with her baby
- diminished concentration; difficulty thinking clearly, particularly when not getting enough sleep
- recurrent thoughts of death or suicide.

**What are recommended treatments?**

Treatment for PPD is usually the same as treatment for any other depression in a woman’s life. Treatments can include psychotherapy, social support and antidepressants. If PPD lasts for a long time without being treated, it can affect the mother’s health, her bonding with her baby, and her relationship with other family members.

If you are concerned about PPD, there are people who can help or direct you to other supports, including family doctors, public health nurses, hospital programs and programs for new mothers in the community.

If any of this information is incorrect or outdated, or if there are additional organizations or programs that would be helpful to include, please e-mail the information to us at access.resources@camh.ca.
